

**2nd Intl. Conference
on Future Education**

Round Table on Education for the 4th Industrial Revolution

**Education for the Future:
*SOME BITS AND BOBS***

J. Martin Ramirez (Nebrija University, Madrid)

Tina Lindhard (IUPS, Hawaii)

HOW education may facilitate a future human-oriented society?

1. attitudinal change

1. open to 4th Industrial Revolution -> IT

2. information from 'cosmic internet'

attitudinal change

from memorizing to understanding

- ability
 - to retrieve information
 - to lead a team &
 - to solve problems
- to think creatively and strategically

*Not so much the quantity of information
as the quality of understanding*

open to 4th Industrial Revolution

blurring physical, digital & biological spheres

IT

- a. **Internet** -> global socio-cultural community
- b. **Cell phones** become a lifeline: social contact, banking, market...
- c. **AI** improves decision capacity & health
- d. **IoT** -> interoperativity

open to 4th Industrial Revolution

Not free of risks

- a. volatility, unstability, inconsistency, uncertainly
- b. vulnerability

*The education of the future has to provide
a compass to navigate and adapt to the unknown*

But we have a problem

- Suicide 2nd cause of death for 15-29 year olds
- USA: 11% over the age of 12, take antidepressants
- antidepressant use is rising in a four-year period:
 - Germany: by 46%
 - Spain & Portugal: it rose about 20%

problems can't be solved on the same level as they were created

The world that we have made as a result of the level of thinking we have done thus far creates problems that we cannot solve at the same level as the level we created them (Einstein)

How to develop our capacity to access knowledge, to bring science and spirituality (inner world) into harmony so that we work for the benefit of all, including Nature?

Our Inner World

- the theory of the 6 Main Levels of Consciousness
- not only a “**thinking mind**” associated with **brain**
- but also a “**feeling mind**” associated with the **heart**
based on phenomenological experience
(it addresses Chalmers’ hard problem of consciousness)
- role of the feeling heart in connecting to knowledge stored outside the body

Recovering Feeling Consciousness

Recommendations for Education

- starting in schools, with young children talking about and acknowledging what they feel
- learning to meditate:
 - mindfulness to increase attention
 - heart-based methods to connect to their self or soul or inner guiding voice

Requirements to get Information from the ‘cosmic internet’

- research into different levels of consciousness
- facilitate feeling consciousness
- teaching of heart-based methods of meditation to access our soul and intuitive abilities
- understand how entanglement between soul (local) and spirit (non-local) network functions
- development of “mystical scientists” capable of accessing non-local Information about problems for benefit of all
