

AI Governance

Walton Stinson

AI Governance

Generative AI:

Governance of generative AI, like ChatGPT or DALL-E, involves several key considerations:

- 1. Data Privacy and Security*
- 2. Ethical Use and Bias*
- 3. Misuse Prevention*
- 4. Safety and Reliability*
- 5. Intellectual Property Rights*
- 6. Transparency and Accountability*
- 7. Regulation and Compliance*
- 8. Fair Access and Inclusivity*
- 9. Impact on Employment*
- 10. Long-term Societal Impact*

AI Governance

AGI:

Governance of General AI (Artificial General Intelligence, AGI) or Super AI (AI that surpasses human intelligence in all aspects) involves several critical considerations, many of which extend beyond those for current AI technologies due to their far-reaching implications:

- 1. Data Privacy and Integrity*
- 2. Robust Ethical Frameworks*
- 3. Safety and Control*
- 4. Prevention of Misuse*
- 5. Global Collaboration and Regulation*
- 6. Transparency and Accountability*
- 7. Impact on Society and Employment*
- 8. Equitable Access*
- 9. Long-Term and Existential Risks*
- 10. Moral and Legal Status*
- 11. Human-AI Interaction*
- 12. Continuous Monitoring and Adaptation*
